

Claim-to-Evidence-and-Test Matrix v0.1

Author: Ivan Kotov
Bruxelles, 2026

c Hardening Pack v0.1

c = a + b / L4 / SER / L4 Witness / ARL / Continuity Bundle

Status: Draft control matrix v0.1

Date: 2026-05-22

Document class: claim registry / evidence matrix / anti-washing control artifact

Assertion class: C-A10 control-layer artifact

This document is a draft technical / architectural profile.

It is not legal advice.

It is not product certification.

It is not implementation-ready.

It is not deployment-ready.

No conformance-supported status is claimed unless separately validated by evidence, tests, and review.

Claim-to-Evidence-and-Test Matrix v0.1

c = a + b class claims, evidence surfaces, conformance tests, and maturity status

Author: Ivan Kotov
Date: 2026-05-22
Status: Draft control matrix v0.1
Layer: c = a + b / L4 / SER / ARL / L4 Witness / c[q] / ester-clean-code
Document class: claim registry / evidence matrix / anti-washing control artifact
Assertion class: C-A10 control-layer artifact

0. Executive definition

This matrix maps major public and technical claims about the c = a + b class to evidence, tests, runtime surfaces, and maturity status.

It exists to prevent two opposite errors:

underclaiming: "this is only an attempt / only documents / only a chatbot skeleton"
overclaiming: "the ecosystem is already externally validated and industrially mature"

The correct discipline is:

```
claim
-> definition source
-> runtime surface
-> test / fixture
-> witness / evidence artifact
-> maturity status
-> remaining gap
```

1. Status vocabulary

Status	Meaning
DEFINED	The concept/class/invariant is formally stated in the corpus.
SPECIFIED	Operational rules, fields, states, or conformance requirements are described.
IMPLEMENTED-SKELETON	A runtime surface or reference spine exists, but it is not yet industrially hardened.
IMPLEMENTED-GATE	A runtime gate blocks, holds, freezes, or routes at least one real path.
TEST-SPECIFIED	Test cases or conformance criteria are described.
TESTED-LOCAL	Local test/fixture/log evidence exists.
EXTERNALLY-VALIDATED	Independent audit, fork, deployment, or reviewer evidence exists.
RESERVED	Corpus recognizes the domain but intentionally avoids premature doctrine.
GAP	Missing or insufficiently connected layer.

A claim may have several statuses at once:

DEFINED + SPECIFIED + IMPLEMENTED-SKELETON + TEST-SPECIFIED

does not equal:

EXTERNALLY-VALIDATED

2. Core claims matrix

ID	Claim	Definition source	Runtime / artifact surface	Test / evidence surface	Current status	Remaining gap
C-001	c = a + b defines the origin of the class.	AGI v1.1 / parent protocol	ester-clean-code as executable skeleton; public corpus	DOI / GitHub release / corpus map	DEFINED	External adoption and citation growth.
C-002	c is not an agent, tool, oracle, or model instance.	SER / Beacon / Entity-governs-agents	Agent mesh boundaries, memory gate, runtime delegation	Direct-agent memory-write denial tests	DEFINED, SPECIFIED, IMPLEMENTED-SKELETON	Full conformance suite and independent replay.
C-003	L4 binds c to cost, time, energy, scarcity, risk, and irreversibility.	L4 Reality Boundary / L4 Witness / posts	Budget gates, network/offline gates, AB modes, resource policies	L4 budget exhaustion tests	DEFINED, SPECIFIED, PARTIAL-IMPLEMENTATION	Unified L4 Runtime Enforcement Profile and stress evidence.
C-004	c[q] means controlled non-collapse under uncertainty.	Qubit-State c; ARQ c[q]; CCDP child c[q]	Memory promotion gates, ambiguity markers, review paths	Non-collapse fixture: hypothesis must not become verified memory	DEFINED, SPECIFIED	Runtime-wide c[q] validator and drift tests.
C-005	Witness is a boundary/evidence system, not an autobiography.	L4 Witness / LHWAI / CCDP Witness	Hash chains, anchor packets, interpretation profiles	Anchor validation report; silent reinterpretation failure test	DEFINED, SPECIFIED	JSON schemas, validator CLI, implementation fixtures.
C-006	ARL handles disputes through standing, admissibility, freeze, quarantine, review, and re-entry.	ARL package / GTARL / CCDP	Freeze/hold/quarantine semantics; review route hooks	ARL freeze/re-entry test	DEFINED, SPECIFIED	Runtime replay evidence across multi-agent disputes.
C-007	Human Anchor a is origin and accountability source, not a magic eraser.	ARL Evidence/Standing; Decision Outcomes; Pre-Lineage; Continuity Bundle	Anchor standing, post-anchor reserved domain, continuity challenge	Human-anchor drift scenario tests	DEFINED, DISTRIBUTED-SPECIFIED	Consolidated Human Anchor Drift Profile and test pack.
C-008	Memory is governed by class, status, provenance, uncertainty, and witnessability.	Memory Map / CMAM / Continuity Bundle / CLI Agent Mesh	JSON/Chroma/cards plus memory gate, class inventory, witness refs	Memory promotion / compaction / quarantine tests	SPECIFIED, IMPLEMENTED-SKELETON	Memory Continuity and Semantic Drift runtime profile.
C-009	Child-facing c must signal state, not content.	CCDP / Soft Safety / CMAM / Red-Black	State-signal schema, minimal disclosure, sealed zones	CCDP conformance tests	DEFINED, SPECIFIED	Specialist review / jurisdictional annex / implementation fixtures.
C-010	ester-clean-code is a cleaned executable skeleton of c, not the whole theory.	Public repo / manifest / package docs	Source tree, routes, memory, agent, witness, L4-related modules	Smoke tests / 90-day evidence pack	IMPLEMENTED-SKELETON	Hardened runtime, external audit, long-run logs.

3. Claim maturity distinction

A critic may correctly say:

```
this implementation is early
this ecosystem is not externally validated
this requires years of long-term evidence
```

A critic may not correctly infer:

```
the class is only an attempt
there is no class definition
there is no architecture
there is only JSON + Chroma
there is only documents
```

unless they identify the missing invariant or failing path.

4. Evidence classes

Evidence class	Meaning	Examples
EV-DOC	normative or architectural document	protocol, profile, matrix
EV-DOI	frozen archival/public object	Zenodo DOI, release asset
EV-HASH	integrity evidence	SHA256SUMS, signed tag, anchor packet
EV-CODE	runtime source surface	module, route, listener, gate
EV-CONFIG	inspectable runtime configuration	policy yaml, budget config, AB mode
EV-TEST	local test or fixture	unit test, conformance fixture
EV-WITNESS	witness-compatible event	chain event, anchor, validation report
EV-AUDIT	independent review	external audit, fork report, reproducible run
EV-DEPLOY	long-running deployment proof	90-day/180-day continuity pack

5. Minimum reviewer rule

A reviewer challenging a claim SHOULD provide:

```
claim_id
criticized assertion
searched documents
searched runtime surfaces
missing invariant or failing path
test case or counterexample
classification: conceptual absence / packaging gap / implementation gap / validation gap
```

A criticism without this structure is not invalid, but it remains a heuristic red-team signal rather than a technical finding.

6. Red-line overclaim failures

The corpus or its defenders MUST NOT claim:

1. industrial maturity without deployment evidence;
 2. external validation without external validators;
 3. full L4 hard enforcement without unified governor tests;
 4. memory stability without drift tests;
 5. witness long-horizon conformance without anchors and validation reports;
 6. child-safety deployment without specialist and jurisdictional review;
 7. legal or clinical authority where the corpus only defines protocol handoff.
-

7. Bridge set

Explicit bridge

The matrix links abstract class claims to runtime and evidence. It preserves $c = a + b$ as origin while preventing the code skeleton, documents, or public posts from being mistaken for the whole class alone.

Quiet bridge I — cybernetics

A system cannot regulate what it cannot distinguish. The matrix distinguishes definition, specification, runtime, test, witness, and external validation so critique can land at the correct control layer.

Quiet bridge II — information theory

A claim gains useful entropy only when it points to verifiable artifacts. Otherwise, both praise and criticism become noisy narrative.

Earth paragraph

A building claim is not accepted because someone says “strong structure.” It points to drawings, steel size, concrete batch, inspection note, and load test. This matrix is the structural inspection sheet for the c corpus.

8. Next actions

1. Maintain this matrix during every hardening release.
2. Add exact repo paths and test IDs after Codex extraction.
3. Link each high-impact public claim to a row in this matrix.
4. Refuse both hype and dismissal when evidence class is lower than the claim requires.
